

OPTIONAL EQUIPMENT : REAR WARNING LIGHT (BLUE LED LIGHT)

Most forklifts are fitted with a buzzer that will make the 'beeping' sound when reversing. In a noisy work environment, on a busy factory floor etc, a person may not hear the buzzer due to high ambient noise and walk unaware into the path of the forklift.

LAMP: 3W × 2pcs.
LIFESPAN: 50,000hrs.

The Rear Warning Light, in addition to the aural warning, provides a visual indicator of a reversing truck. In loud working conditions, a person will still be able to perceive a reversing truck by the sight of the 'blue' light on the ground. Moreover, the visual cue enables better perception of the actual truck location and its direction. This will pre-emptive and give ample time for the person to move away from the reversing truck.
